

Antti Hiltunen

Los Angeles, CA | anttihil@gmail.com | github.com/anttihil | linkedin.com/in/hiltunen-antti

Software engineer who builds internal platforms: infrastructure, AI systems, and the interfaces people actually use. At UCLA, replaced 20 legacy sites with a multi-tenant platform and migration tooling as one of two engineers, and built an on-premise platform for data-sensitive workloads. Before, primary UI developer for two commercial robot models.

EXPERIENCE

Software Engineer, UCLA

Jan 2025 - present

Designed and delivered the replacement end-to-end for 20 legacy sites:

- Cut ~1,000 hours of manual migration by having coding agents mine millions of lines of site data into deterministic XML transformation rules
- Consolidated 20 independently maintained sites into a multi-tenant WordPress platform with centralized CI/CD and IaC
- Enabled decommissioning decisions with a content inventory tool surfacing media volume, page age, and content issues invisible to admin users

Architected an on-premise platform for faculty data that can't leave university hardware:

- Shipped a self-service WCAG compliance system targeting an ADA exposure of ~60,000 public PDFs, adopted by a five-person remediation team
- Built the full stack alone, from GPU provisioning and job scheduling through multi-tenant auth, admin, and application UI
- Piloted self-hosted models for collaborative classroom analysis, tuned with vLLM to serve concurrent users on a single constrained GPU

Software Engineer (Robotics), Brain Corp (via ISBX)

May 2022 - Dec 2024

Sole UI developer for two commercial robot models across ~20 releases:

- Reduced dev cycles from days to minutes and enabled portable sales demos by embedding a protocol-level robot simulator in the frontend, eliminating all hardware and backend dependencies
- Delivered the UI for on-demand A-to-B cleaning, a flagship feature replacing pre-taught fixed routes, using DeckGL for map zone selection over clustered points of interest
- Cut UI field troubleshooting time by 50% for QA by shipping an embedded observability dashboard
- Expanded market reach to 15 countries by internationalizing the UI from a single hard-coded language

Lecturer, UCLA

Jul 2019 - Jan 2022

Taught formal logic and critical thinking to ~500 students

SKILLS

Platform & infrastructure: AWS, Terraform, Ansible, GitHub Actions, Docker, Linux, nginx, PostgreSQL

AI systems: vLLM, Ollama, AWS Bedrock, Python/FastAPI, OCR

Frontend: TypeScript/React, DeckGL, HTML5 Canvas, Jest/Vitest

Also: Go, SolidJS, PHP, Bash, Selenium

EDUCATION

UCLA, PhD in Philosophy (2019); MA in Philosophy

University of Turku, BSocSc in Philosophy, Math, Linguistics
